TITLE: Lubricant for hot processing of metals. Class 23, No. 189500

SOURCE: Izobreteniya, promyshlennyye obraztsy, tovarnyye znaki, no. 24, 1966, 45-46

TOPIC TAGS: metal ~~hot~~ processing, ~~metal hot processing~~ lubricant, lithium, ~~containing lubricant~~, alkyl sulfate ~~containing compound~~

ABSTRACT:

This Author Certificate introduces a lubricant for hot processing of metals, based on an aqueous suspension of graphite. To improve the quality of lubricant, lithium formate, lithium carbonate and secondary alkyl sulfates are added to the initial graphite suspension. [ND]

TITLE: A Rational Method for the Calculation of Prestressed Reinforced-concrete Ship Structures (Ratsional'nyy metod rascheta predvaritel'no napryazhennykh sudovykh zhelezobetonnykh konstruktsiy)

PERIODICAL: Tr. Novosibir. in-ta inzh. vodn. transp., 1955, Nr 1, pp 155-168

ABSTRACT: A method of calculation relative to cracking stability is evolved for the proper selection of the concrete section; the method comprises the determination of the reinforcement area required in the compressed region. A solution is provided for the problem of obtaining a least-weight structure, which is of paramount value in shipbuilding.

TITLE: An Experimental Investigation of the Strength of T-section Concrete Members in Eccentric Compression When the Compressive Force Eccentricities Are Small (Eksperimental'noye issledovaniye prochnosti betonnykh elementov tavrovogo secheniya pri vnetsentrennom szhatii v sluchaye malykh ekstsentrisitetov szhimayushchey sily

PERIODICAL: Tr. Novosibir. in-ta inzh. vod. transp., 1956, Nr 2, pp 101-106

ABSTRACT: The author gives an account of tests made on nine concrete specimens tests that he conducted for the purpose of verifying the well-known experimental relationship

$$De_0 = const \cdot RS \cdot N_{pr} = RS_0$$

which had been found by a number of investigators to apply in the case of rectangular section, I-section and tube shaped specimens. The concrete specimens tested by the author were T-section, 70 cm long, 180 cm deep, and with flanges 200-400 mm wide and 30 mm

An Experimental Investigation of the Strength of T-section Concrete (cont.)

thick and a web - 60 mm thick. The essence of the cited relationship is this: When a concrete specimen is subjected to a compressive force N_p acting with small eccentricities e the moment of the resultant force D of the compressive stresses with respect to the less stressed of the two extreme fibers of a given cross section thereof (having the moment arm e_o) will be a constant and not a function of the eccentricity. In the above expression R is the prism strength and S and S_o are the static moments of the concrete-specimen cross section in question, S being the moment with respect to its lower edge and S_o the moment with respect to the adjoining reinforcing element. The author asserts that his experiments have now confirmed that the above-cited relationship applies in the case of T-section concrete specimens also. Because the author's tests were conducted at a loading rate v_1, whereas the earlier tests, particularly those of the TsNIIPS (Central Scientific Research Institute of Industrial Structures), had been carried out at a rate v_2, in analyzing the test results he employs the conversion factor

$$k = \log_{10} v_1 / \log_{10} v_2$$

Design of ships; a textbook and methodical manual on course and thesis projects (Proyektirovaniye sudov; uchebno-metodicheskoye posobiye po kursovomu i diplomnomu proyektirovaniyu) Novosibirsk, Zapadno-Sibirskoye knizhnoye izd-vo, 1965. 81 p. illus., biblio., tables. (At head of title: Ministerstvo rechnogo flota RSFSR. Novosibirskiy institut inzhenerov vodnogo transporta). 700 copies printed.

TOPIC TAGS: marine engineering, inland waterway ship, shipbuilding engineering

PURPOSE AND COVERAGE: This textbook, intended for students of the Novosibirsk Institute of Water Transportation Engineers is to be used for seminars and in the preparation of thesis projects; it can also serve as a practical designing aid. The book, containing all necessary information on the main features of the basic types of inland-waterway cargo ships, can be used for primary design work.

TITLE: Applying the G. Ye. Tavlenko formula for calculating the static-stability levers of river vessels

SOURCE: Ref. zh. Vodnyy transport, Abs. 11V35

REF SOURCE: Tr. Novosib. in-ta inzh. vodn. transp., vyp. 24, 1966, 30-33

TOPIC TAGS: shipbuilding engineering, ship stability, marine engineering

ABSTRACT: The admissibility of using approximate calculation methods for finding the static- and dynamic-stability righting levers in project calculations is determined under the condition that their accuracy will not be less than the accuracy of those used in determining the external forces, which is nearly 10%. A G. Ye. Tavlenko formula is given which contains the coordinates of the center of buoyancy at a 90° heel angle and the metacentric radius at zero heel angle, and the approximate relationship of these coordinates, specified by V. L. Tosdyunin, V. G. Vlasov, and A. P. Van-der-Vliet, is applied. It is shown that Tavlenko's formula provides a calculation accuracy no lower than that of the common calculation method, which is based on the use of the ship's lines of form.

15. Production problems in petroleum industry. M. Lesz. *Nafta (Krakow)*, 1952, 8, 307–8. Describes difficulties encountered in completing the first half of the 6-year plan. For 7 months ending 31 July only 98% of plan was reached due to failure of new and deepened wells to reach required production. This in turn was due to inadequate drilling below 1500 m. Newly transferred from U.S.S.R. Ustrzyki region failed to produce its share, due to unpreparedness and poor living conditions. Apart from these particular shortcomings, efficiency in the industry is low generally, although gas and natural gasoline production are up to plan target. M. S.

Lesz M. Basic Problems in Workshop Planning and Settling Mutual Economic Accounts in Industry.

„Podstawowe zagadnienia w dziedzinie planowania wewnątrzzakładowego i rozrachunku gospodarczego w przemyśle". Ekonomika i Organizacja Pracy. No. 2, 1954, pp. 53-62, 6 figs.

The general plan in big works should be based on workshop planning taking into account the most important factor — the production planning. The principle of production planning in the metal industry, coal mines and steel works is shown by the author in harmonograms. The author indicates the duties of the dzspatching department which watches over the realization of harmonograms in production, supplies, loading of particular machines and services. Among other problems is discussed techno-economical department planning — an incentive for the planning staff as well as the workers to achieve better techno-economical factors and such inter-departmental settlement of mutual accounts as shows results of workshop planning.

AUTHOR: Leszczycki, S. (Warsaw)

TITLE: The Latest Currents and Tendencies in Geography (Noveyshiye techeniya i napravleniya v geografii)

PERIODICAL: Izvestiya Vsesoyuznogo geograficheskogo obshchestva, Vol 91, Nr 1, pp 51-59 (USSR)

ABSTRACT: This is a short review of old and new trends in geography. The author describes the historical development of geography as a science and its different branches, such as general geography, anthropography, physical geography, horologic geography, ecological geography, etc. He suggests dividing the various branches of geography into the following system: 1) history of geography, 2) physical geography, 3) commercial geography, 4) regional geography, 5) cartography, 6) mathematical or astronomical geography, 7) historical (archaeological) geography, 8) other branches (specializations), such as medical geography, military geography, urban geography, etc. He defines geography as the science of various extensive
